Medical solutions portfolio

BARCO

About Barco

Focused on transforming the delivery of care, Barco connects healthcare professionals at every patient touchpoint, from the imaging room to radiology, through specialist consultations and into the surgical suite. We offer a network of medical imaging solutions that deliver the complete picture to support more informed decisions, when and where it matters most.

Recognized as the Visionary Innovation Leader in medical displays by Frost & Sullivan

WARRANTY

With our Coronis OneLook display solution for breast imaging and general radiology, you finally get to see medical images in complete detail without needing to zoom or pan. Review 2D, 3D and moving images side-by-side with extreme clarity and rich colors. Launch your go-to applications without any clicks using the customizable touch buttons!

Your benefits

- > 32-megapixel resolution on large 33" screen: see complete images in one glance
- > 1,200 cd/m² brightness and 1300:1 contrast ratio: high medical contrast
- > Extra wide color gamut with SteadyColor technology: clear & consistent colors
- > Customizable on-screen touch buttons: personalized workflow
- > QAWeb Enterprise platform: centralized QA & compliance management

Coronis Fusion

radiology

Coronis Fusion, perfected for color imaging with vivid and calibrated colors to help you see important color image details. Ergonomically designed to reduce repetitive stresses. Optimized for an efficient workflow with our suite of Intuitive Workflow Tools.

Your benefits

- > Bright, calibrated luminance of 600 cd/m² for the lifetime of the display
- > Uniform luminance with patented Color PPU technology
- > High contrast of 2000:1 to see subtle image details
- > SteadyColorTM calibration technology to see details in the important color content of images
- > Wide Gamut display
- > Wide viewing angle in your field of view
- > Higher brightness allows you to see more details with less eye strain
- > SoftGlowTM task and wall lighting
- > SpotViewTM to see more details in the image more quickly – 15.5% decreased reading time
- > Auto QA and compliance tests meet the latest regional standards
- > Assure compliance and uptime of all your PACS workstations
- > Intervention-free QA saves time, reduces effort and cost
- > Industry-leading 5-year warranty

breast imaging

radiology

dentistry

A family of diagnostic displays that bring dependable diagnostic imaging to its true potential. Nio's proven technologies ensure diagnostic confidence at all times, making it the standard for the radiology reading room.

Your benefits

- > Most efficient dual-head option on the market
- > Highest brightness and contrast - luminance ratio exceeds ACR guidelines
- > Minimal image manipulations – less windowing, leveling, zooming & panning
- > More DICOM JNDs to see more subtle details quicker
- > Uniform image rendering center to edge
- > Factory-fit front cover reduces reflection and improves visible contrast
- > Industry-leading 5-year warranty

Clinical collaboration at home, in the hospital, anywhere

Nio Color 8MP

- Designed for home reading with integrated microphone, camera and speakers
- Large 32" screen size with 8MP resolution and excellent image quality
- Automated QA & compliance

Models and options

QAWeb Enterprise

Always a clear view

QAWeb Enterprise supports consistent image quality through automated calibration and QA, and also enables compliance to the latest regional and international regulations for image quality. Get the most out of your display fleet, in the hospital, at home, or elsewhere, and ensure best-in-class performance and optimal usage throughout your displays' lifetimes.

What makes QAWeb Enterprise so unique?

- > Scalable: Powerful tools to manage workstations from anywhere, at anytime
- > Flexible: Customize policies to meet your quality requirements
- > Intuitive: Effortless compliance and smart reporting
- > Secure: Assured security and patient privacy

Intuitive Workflow Tools

Diagnostic work can be complicated, with many cases to analyze in little time. That's why your medical display should not just be a medium to view digital images, but also an active tool that helps you work with them, comfortably. Our Intuitive Workflow Tools are designed to do exactly that.

Thanks to our advanced medical display controllers, Intuitive Workflow Tools are integrated into your Barco display for radiology, mammography, pathology, clinical review imaging and dentistry.

- > Improve your focus with a range of tools specifically designed to help you concentrate on important details.
- > Adapt your workstation's settings to how both you and your colleagues work best.
- > Boost your workflow further thanks to those extras and make your workspace extra comfortable!

You choose which ones you use, and how you use them. Work smarter, not harder!

[Learn more about our suite of Intuitive Workflow Tools](#)

Some Intuitive Workflow Tools in the spotlight...

SpotView

SpotView enables focused observation during readings by dimming images outside a region of interest and enhancing the contrast within it.

Especially helpful when viewing pediatric extremities, breast calcifications and chest images, SpotView supports analyzing subtle differences in the image.

DL Precise

If you're a radiologist who frequently handles dense breast images, then DL Precise is a true game-changer. The AI-driven software tool augments an area you choose with a vividly colored density map and calculates the morphology of suspicious areas.

DL Precise is currently available in limited regions. Please consult your Barco representative to confirm availability.

SoftGlow

Get full control of the ambient light surrounding your workstation. Displays equipped with SoftGlow offer you two light sources, coming from your display.

In this way, your eye needs to adapt less intensively when it moves from your bright display to something in your darker office. You can choose which one should be on or use both at the same time. Adjust their brightness according to your preference!

Your benefits

- > Designed for hospital and dental environments, with various mounting options and additional features
- > Ambient Light pre-sets for dark rooms, offices and the OR
- > Supports efficient inter-disciplinary collaboration with consistent quality controlled images
- > Cleanable displays for infection control (70% alcohol-based cleaning agents)
- > Sensor for bright and consistent image quality, and remote QA management tools
- > Lowest cost-of-ownership over time without a need for capital budget
- > 3-year warranty

Your benefits

- > Deep blacks and accurate colors from any viewing angle
- > 4:4:4 chroma subsampling for impeccable color accuracy
- > Near-zero latency provides perfect surgical hand-eye coordination
- > Improved visualization in high ambient light environments
- > Backlight output stabilization guarantees image stability and brightness over the lifetime of the display
- > Cleanable infection control design complies with strict OR hygiene standards
- > Unique cable management system makes it easy to install and disinfect
- > Automated failover feature so a backup signal is always available
- > Perfect match with our [Nexxis OR-over-IP platform](#) for full OR integration

TECHNOLOGY

TOUCH

GLASS COVER

Barco's MDMX family is a series of in-wall consoles for the operating room. Combine and view multiple images, by relying on an intuitive control system. The consoles have built-in Nexxis functionality and a programmable Nexxis button, so they can be integrated easily within both new and existing Nexxis systems.

Nexxis is available via OR solution providers, ask your contact person about it!

Your benefits

- > Enjoy ergonomic viewing support for everyone in the OR: from doctors and nurses to trainees
- > Place multiple images or video sources next to each other
- > Don't lose space, the consoles are built into the OR wall
- > Interact with remote-PC video sources as if you're in front of them
- > 2-year warranty

Platforms for the digital operating room

surgery

Nexxis™ is our video-over-IP platform for the integrated digital operating room. It makes it possible for you to share uncompressed, high-resolution video (and audio) in and between your operating rooms. This unique technology platform has been specifically designed for integration into the digital OR.

Your benefits

- > Raw, uncompressed images – eliminating artifacts
- > Near-zero latency for perfect hand-eye coordination
- > 4K end-to-end
- > Simple to set up the OR (all you need is a single optical cable)
- > Easy plug and play of devices
- > Central & remote control
- > Always up to date with the latest networking and visualization technologies
- > Easy to adopt new integration requirements in the OR
- > Easy to connect new ORs to the network architecture
- > Expansion results in lower TCO

Nexxis integrates into the majority of the world's leading OR solution providers. Ask your contact person about Nexxis, its benefits of operational efficacy and how it can future-proof your ORs.

Nexxis WorkSpot

Control room solution
for interventional surgery

Offering one view of all information as well as flexible layouts, Nexxis WorkSpot has been designed to improve teamwork and reduce clutter and complexity in the interventional control room. It brings together all imaging sources on a single display, managed by a single keyboard and mouse.

NexxisLive

Healthcare collaboration & conferencing solution

Remote work is everywhere, so why not make it happen in hospitals, too? NexxisLive can be used by any healthcare professional - with any level of expertise; as well as medical device representatives or experts.

Basically, anyone in the surgical and interventional arena who needs to:

- > collaborate with remote users, to consult, to mentor or proctor sessions
- > assist a team during procedures or cases
- > teach to students who are in a university classroom or lecture hall
- > broadcast a live-procedure to a congress venue – in real time under secured bi-directional communication

With NexxisLive, you can talk, chat, share and draw as if you're all in the same room. No matter how far away you are.

Collaborate, educate and demonstrate, live from your OR

**Barco technologies
that make a difference**

I-Guard™ front sensor

This integrated, patented front-of-screen photometer has become the industry-standard technology for monitoring image quality and DICOM consistency. The new generation of I-Guard has been improved to measure much finer gradations of colors spread over the color gamut of the display. Combined with Barco's QAWeb service, it provides an easy-to-use tool for calibration and Quality Assurance.

Benefits

- > Worry-free DICOM accuracy
- > Continuous, automated QA of the entire optical stack
- > Remote assessment of your display's image quality

I-Guard video

Ambient Light Compensation™ (ALC)

Ensures that your diagnostic display system remains DICOM compliant under all lighting conditions by monitoring display brightness compared to the ambient light level in the room. In combination with QAWeb, ALC warns you when the ambient light level exceeds a predefined threshold.

Benefits

- > DICOM compliance under all lighting conditions
- > Optimal image quality in every environment so no detail goes unnoticed

Uniform Luminance Technology™ (ULT)

LCD panels typically suffer from non-uniform behavior across more than 25% of the screen area, causing noise in the image. ULT eliminates those luminance and color non-uniformities, making sure that your display is compliant with DICOM GSDF across the entire screen area.

Benefits

- > Uniform luminance across the entire screen
- > Perfect DICOM compliance from center to corner

ULT technology highlight

A thumbnail image of a document titled 'Uniform luminance technology'. The document contains text and small images related to the technology. Below the thumbnail is a red button labeled 'Download'.

Download

Color Per Pixel Uniformity™ (PPU)

Measures and adjusts the luminance of each pixel and makes it permanently DICOM compliant. As such, PPU eliminates screen noise, ensuring consistent colors and grayscales.

Benefits

- > Reduced screen noise
- > Improved contrast and accuracy in fine details
- > Improved image quality at a lower dose to the patient

Fusion

'Fusion' design replaces a dual-head display setup by a single, large-screen monitor without a hindering central bezel. It allows you to place more images on the screen – just the way you want – which has proven to increase productivity by up to 19% and reduce eye strain.

Benefits

- > Improved reading productivity
- > Easy side-by-side comparison of studies
- > Reduced eye fatigue

Barco Optical Glass™

Reduces reflection, enhances image sharpness and viewing comfort. The multi-coated glass is highly durable, scratch-resistant, and protects the LCD panel from physical damage. A protective front cover – available on all Barco displays – further enhances the diagnostic experience.

Benefits

- > Protection of your valuable LCD panel
- > Improved image contrast & minimal reflections
- > Easy and safe cleaning

Coronis Fusion video

[Watch video](#)

IPS-Pro

A breakthrough LCD architecture offering a significantly wider viewing angle than competing LCD technologies. It ensures images are displayed more accurately and with a higher contrast ratio near the sides of the display. With IPS-Pro, the viewing angle is 120°, which is nearly twice the value achieved by other technologies.

RapidFrame™

For high-speed cine imaging without blur when reviewing multi-frame image sequences – such as CT, tomosynthesis, breast ultrasound and breast MRI – or when hovering over the image with the magnifying glass. RapidFrame technology counteracts motion blur by more quickly adapting pixels to a high frame rate.

I-Luminate™

Simply push the I-Luminate™ 'hot light' button to temporarily boost your display brightness, and get a clearer view. Combined with Barco's handy film clip, I-Luminate allows you to compare studies with film-based priors on the display.

Benefits

- > High-quality visualization of images
- > Wider viewing angle improves multiuser viewing

Benefits

- > High-speed cine imaging without blur for fast interpretation
- > Increased screening efficiency due to highly efficient diagnostic workflow

Benefits

- > Enhanced perception of small and low contrast details
- > Simplified comparison with film-based studies
- > Uninterrupted DICOM-compliance

RapidFrame video

[Watch video](#)

SteadyColor™ & SteadyGray™

Around 90% of images generated are now in color and color is often used for additional functionality (e.g. combining Doppler images with ultrasound). In order to guarantee consistent, perceptually linear color and still meet the DICOM standard for grayscales, SteadyColor executes advanced calibration for both grayscale and all Just Noticeable Differences (JNDs). This is achieved using multiple sensors in combination with numerous 3D Look-Up Tables (LUTs). SteadyGray uses the same color calibration technology to achieve a more constant and consistent gray appearance.

Benefits

- > Maximize the diagnostic value of color in images
- > Maintain image quality and DICOM compliance under all lighting conditions

SteadyColor technology highlight

[Download](#)

SpotView™

SpotView creates a bright focal point on the screen, enhancing brightness and contrast inside a circular region of interest while dimming the surrounding image area. This heightens visibility of subtle differences in the image. With SpotView Mag, you can even double the size of the image so no detail goes unnoticed. SpotView has been proven to decrease reading time by 15.5%, with 6% increased reading accuracy in evaluation of mammography contrast-detail phantom.

Benefits

- > Better visibility of subtle differences in the image
- > Extremely helpful when viewing pediatric extremities, breast calcifications and chest exams

SpotView video

[Watch video](#)

DimView™

DimView automatically dims the auxiliary displays used for patient worklists or dictation, reducing peripheral ambient light during readings so the eye can better focus on details on the diagnostic display.

Benefits

- > Improved focus on the main display, no distractions
- > More ergonomic reading experience

DimView video

[Watch video](#)

SmartCursor™/ FindCursor™

The use of multiple resolution displays in a PACS workstation results in the cursor often getting stuck traveling from one display to another, if you can even locate the cursor in the first place. SmartCursor maps the cursor to the correct places in the adjacent display. FindCursor indicates the location of the cursor with a highlighted circle.

Benefits

- > Avoid losing time locating or moving the mouse cursor
- > Smoother and faster workflow

SmartCursor / FindCursor video

[Watch video](#)

[Watch video](#)

VirtualView™

VirtualView provides radiologists with a virtual navigational head on the main display. It appears and disappears on user command, allowing you to add or remove this screen content at your convenience.

Benefits

- > View other screen content more comfortably
- > Ideal for viewing worklists, research, dictation, or ancillary tasks
- > Reduce the number of displays needed; simplify the desktop

VirtualView video

[Watch video](#)

Conference CloneView™

Conference CloneView software is a high-performance, easy-to-use tool for projecting medical images from a diagnostic display onto a large screen, especially useful in classroom settings.

Benefits

- > High-quality cloned image without losing pixel precision
- > Fosters collaboration between peers
- > Ideal during multi-disciplinary team meetings

Application Appearance Manager™

Application Appearance Manager allows you to individually manage the color profile and luminance of each application window so content appears as intended.

Benefits

- > Seamlessly integrate color (e.g. color photos) into the diagnostic workflow
- > Manage the luminance of application windows depending on image content

User Profiles

User Profiles creates a custom profile, set per modality and per user. It enables a quick environment switch for image type, such as a lower luminance for X-ray images and hig

Benefits

- > Read images according to your own preferences
- > Automatically get the right display settings for every modality

SingleView™

SingleView enables the use of the entire display as one display, and eliminates any tearing down the center of the display.

Benefits

- > More flexible desktop where images can be placed in the center of the screen
- > More ergonomic viewing experience

Screenshot

Capturing ideal images for meetings and review, this tool enables you to take a screenshot of what is currently in focus.

Appearance Manager video

[Watch video](#)

User Profiles video

[Watch video](#)

Benefits

- > Easy to communicate and share images and data
- > Fosters easy collaboration between peers

Optical bonding

Optical bonding significantly enhances the visual quality and durability of Barco's surgical displays by eliminating the air gap between the cover glass and the panel. This reduces internal reflections, increases brightness, and improves readability, even in bright environments.

Wide gamut & color calibration

Wide gamut and color calibration ensure true-to-life color reproduction essential for accurate medical imaging. Barco's surgical displays provide consistent color accuracy, enhancing visual clarity and detail recognition, which is critical for surgical precision.

Composition, PiP & PaP

Composition, PiP (Picture-in-Picture) & PaP (Picture-and-Picture) features in Barco's surgical displays allow multiple image sources to be displayed simultaneously, enhancing workflow efficiency and providing comprehensive visual information during surgical procedures.

Benefits

- > Enhanced visual clarity and brightness
- > Improved durability and shock resistance
- > Better touch precision and accuracy

Benefits

- > True-to-life color reproduction
- > Consistent color accuracy
- > Enhanced visual clarity and detail recognition

Benefits

- > Simultaneous display of multiple image sources
- > Enhanced workflow efficiency
- > Comprehensive visual information

Failover

Failover capabilities in Barco's surgical displays ensure uninterrupted performance by automatically switching to a backup signal source in the event of a signal loss, maintaining continuous operation.

Benefits

- > Uninterrupted performance
- > Enhanced patient safety
- > Continuous availability of critical visual information

BLOS (Backlight Output Stabilization)

Backlight Output Stabilization (BLOS) technology maintains optimal brightness and contrast in surgical displays, ensuring consistent image quality and enhancing the visibility of fine details.

Benefits

- > Consistent image quality
- > Enhanced detail visibility
- > Reduced eye strain

Nexxis Integration

Nexxis Integration allows Barco's surgical displays to seamlessly connect with the Nexxis digital operating room platform, providing uncompressed video, audio, and data transmission with near-zero latency.

Benefits

- > Seamless connectivity
- > Real-time collaboration
- > High-quality, synchronized visual information
